1. OBJECTIVE

This document describes the design, simulation, and characterization of a Multiplexer Module filter targeting Band 20 (800 MHz) for UWB (Ultra-Wideband) Filter. The filter is designed on Langasite substrate with a target center frequency of 5249.6 MHz and bandwidth of 300.7 MHz. The objective is to validate that the filter meets the required insertion loss, rejection, and linearity specifications for integration into the UWB (Ultra-Wideband) Filter module. This design iteration addresses feedback from the previous revision regarding out-of-band rejection improvements and temperature stability.

2. SCOPE

- Filter Type: Multiplexer Module
- Frequency Band: Band 20 (800 MHz)
- Application: UWB (Ultra-Wideband) Filter
- Substrate: Langasite

- Design Tool: Matlab RF Toolbox R2024b
- Design Center: Osaka Design Center

This specification applies to all variants of the Multiplexer Module design targeting Band 20 (800 MHz). Results are used to qualify the design for mass production release.

4. TEST PROCEDURE

1. Open Matlab RF Toolbox R2024b and load the Multiplexer Module template project.
2. Define the substrate stack: Langasite with specified layer thicknesses.
3. Set design targets: center freq 5249.6 MHz, BW 300.7 MHz.
4. Run initial EM simulation with 2D mesh density of 20 cells/wavelength.
5. Optimize resonator geometry using gradient descent (target IL < 2.9 dB).
6. Verify coupling coefficients between resonator stages.
7. Run 3D FEM simulation to account for package parasitics (SiP (System in Package)).
8. Export GDS-II layout for mask fabrication.
9. Fabricate prototype wafers (6-inch, Langasite).
10. Perform on-wafer probing using Rohde & Schwarz FSW Signal Analyzer.
11. Measure S-parameters (S11, S21, S12, S22) from 100 MHz to 15749 MHz.
12. Compare measured results against simulation and specification limits.
13. Perform temperature cycling (-40°C to +85°C) and re-measure.
14. Document results and generate summary report.
